

Cable-Free Collaboration

Modena Hub™ is the only system that provides a truly wireless interaction with a room's AV equipment.

WIRELESS USB

Modena Hub Wireless USB connects your UC software with the room's AV equipment, enabling attendees to wirelessly participate in remote conferencing.

WIRELESS SHARING

With Modena Hub, every laptop, tablet, or mobile device can both share screens with the room display and receive content, resulting in more comfortable meetings. By eliminating impediments like HDMI cables, adaptors, or dongles, Modena Hub brings out the best in BYOD.

AV EQUIPMENT

LAPTOP

Wireless sharing gives all meeting attendees the ability to present content to the meeting room display, or to other attendees' devices, in a simple way.

Wireless USB allows users to quickly connect to meeting room peripherals without wires or unnecessary hassle.

Wireless is More

Conferencing technology can hinder as much as it helps. Time wasted trying to manually connect devices to the room (not to mention the resulting frustration), can start any meeting off on the wrong foot. Modena Hub bypasses this problem by eliminating cables entirely, providing participants on both sides of the call with clear communication every time, all while using their own devices.
